John Popik  
President of Nett Technologies Inc.  
2-6707 Goreway Drive  
Mississauga, Ontario  
Canada L4V 1P7

Dear Mr. Popik:

The U.S. Environmental Protection Agency (EPA) Technology Assessment Center has reviewed your request for verification of the MD300 diesel oxidation catalyst (DOC). Based on our evaluation of the verification application, the test data, and additional information provided, EPA hereby verifies that this technology reduces emissions of certain criteria pollutants by the percentages described in the table below.

The technology is approved for use on the following engines and/or vehicles provided all of the operating criteria are met as described below:

<table>
<thead>
<tr>
<th>Technology</th>
<th>Engine Model/Application</th>
<th>Fuel, Max Sulfur (ppm)</th>
<th>Reductions (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Nett Technologies Inc. MD300 Diesel Oxidation Catalyst (DOC)</td>
<td>4-cycle, constant speed engines, rated at 100-750hp for NR and Stationary applications, certified to Tier 1, 2, or 3</td>
<td>15</td>
<td>PM: 20, NOx: 0, HC: 80, CO: 90</td>
</tr>
</tbody>
</table>

The following criteria must be met in order for appropriately retrofitted engines to achieve the aforementioned emission reductions:

1) Baseline engine must be in a certified configuration and operating on fuel with less than 15 ppm sulfur.

2) The engine exhaust temperature must achieve at least 200°C at some point in the duty cycle.

3) The engine/equipment must not be equipped with a crankcase oil burning system.

4) The engine should be well maintained and not consume lubricating oil at a rate greater than that specified by the engine manufacturer.
5) The engine must **not** have been originally certified or equipped with a DOC or diesel particulate filter.

6) For constant speed engines in stationary applications, Nett Technology Inc. is responsible for working with end-users in determining the engine’s eligibility and compliance with applicable federal, state, and/or local regulations.

EPA estimates that this device will incur no discernable fuel economy penalty when used in a compatible application.

If the MD300 DOC is modified from the application description provided to EPA and representative of products tested, you must notify EPA immediately. This verification does not automatically confer to modified devices or devices that are similar to this original verification.

Information on the MD300 DOC, percent reduction, and applicable engines will be posted on the EPA’s Verified Technology List website at: [http://www.epa.gov/cleandiesel/verification/verif-list.htm](http://www.epa.gov/cleandiesel/verification/verif-list.htm). As you know, Nett Technologies Inc. will be responsible for completing the required in-use testing program and for submitting all in-use testing data to EPA as outlined in EPAs in-use test methods. The in-use MD300 DOC must comply with all Clean Air Act and Greenhouse Gas regulations.

Thank you for participating in EPA’s Technology Assessment Center Verification Program. If you have any questions or comments, please contact Julie Hawkins, of my staff, at (202) 343-9072.

Sincerely,

[Signature]
